The Professional's Choice

## Not Only Can IronTite Save You Thousands in Engine Repairs, It Saves Critical Service Bay Time for the Professional Shop!

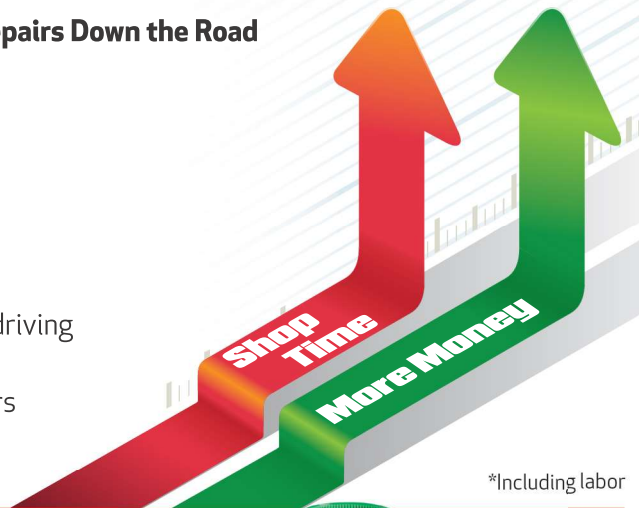

Many competitive products take up to 5 hours to flush the cooling system. With the average labor rates ranging from \$80-\$125/hour, that equates to \$400 - \$625 of potential lost labor revenue that could have been applied to other profitable repairs.

### IronTite Cooling System Additives Save Money by Avoiding Expensive Repairs Down the Road

- Overheating issues can cost thousands in expensive engine repairs\*
- The average replacement cost of a water pump is over \$500\*
- A replacement timing belt repair often costs \$1000 or more\*
- The average radiator replacement is \$520-\$725\*

### Save Valuable Shop Time to Make More \$Money\$

- Cleans the cooling system & heater core in 12 minutes
- Less than 30 minutes total time from start to finish (from preparation to driving the vehicle out the door)
- Doesn't tie up valuable technician & service bay time (can take up to 5 hours with competitive products)
- Free-Up your service bays for other profitable repair jobs

\*Including labor

## Using all three products provides most thorough method to get the best possible results to stop and/or prevent cooling system leaks

**1** Use **Thoro-Flush** to thoroughly clean the cooling system removing rust, corrosion, and other debris along with "neutralizing" any left behind coolant solution or oil based products.

**2** Next, use **Ceramic Motor Seal** to fully coat the inside of the cooling system with a thin layer of ceramic. It will seal porous or blemished areas of the casting metal as well as any potential (weak) areas.

**3** And Finally, use **All Weather Seal** to emulsify with any kind of engine coolant mixture as a great preventative for any potential future leaks as well as sealing existing leaks.
