The Professional's Choice

## Thoro-Flush Fixes What Other Name Brand Flush Products Can't

In today's installer market, time is money, so why tie up precious service bay time with labor rates ranging from \$80-\$125/hour. Don't spend up to 5 hours flushing your cooling system with other branded flush products only to have marginal results.

Thoro-Flush will clean the entire cooling system in 30 minutes or less, including removing metal shavings, rust contaminants, and previous radiator sealants or non-compatible antifreeze solutions that may have gelled up the cooling system.

**We are the Drano® of the Aftermarket!**

### Why We're a Cut Above the Rest

1. **Opens and cleans out plugged heater cores.**
2. **Clears out gelled Dex-Cool** and other proprietary OE anti-freeze chemical mixes with a simple flush.
3. **Removes metal shavings** from previous stop leak products stuck in the system
4. **Diesel "Oil Cooler" failure**, cleans cooling system in single flush.
5. **Fuel Tank Flush & Cleaner.** Use before installing a new fuel pump to prevent premature pump failure and warranty claims.
6. **Removes Ethanol/Bio Fuel** build up, rust, scale, oils and other sludge from Fuel Tank.
7. **Farmers Friend** – flush out any type of gas engine machinery after they have sat idle during the off-season.
8. **Safe** for use on cast iron, aluminum, brass and plastic.
9. **Great Value:** One bottle will flush up to 6 gallons. The competition will only slush up to 3 gallons.

### Increase Your Related Sales Opportunities

**Using all three products provides most thorough method to get the best possible results to stop and/or prevent cooling system leaks**

**1** Use **Thoro-Flush** to thoroughly clean the cooling system removing rust, corrosion, and other debris along with "neutralizing" any left behind coolant solution or oil based products.

**2** Next, use **Ceramic Motor Seal** to fully coat the inside of the cooling system with a thin layer of ceramic. It will seal porous or blemished areas of the casting metal as well as any potential (weak) areas.

**3** And Finally, use **All Weather Seal** to emulsify with any kind of engine coolant mixture as a great preventative for any potential future leaks as well as sealing existing leaks.

**We're the 1,2,3 Punch Solution for Your Cooling System**
